

Outpatient Department Guide

Hospital Knowledge Base Assistant — Reference Document

Services

Outpatient services include consultations, follow-up visits, diagnostic evaluation, and selected procedures that do not require overnight admission.

Visit Flow

Typical flow includes registration, waiting-area check-in, clinical assessment, consultation, investigations when ordered, and follow-up planning.

Appointments

Patients should bring relevant previous reports, medication information, identification, and appointment details.

Escalation

Patients with sudden or severe symptoms should be redirected to emergency services rather than waiting for a routine outpatient appointment.

Note: This is a synthetic knowledge-base document created for application development, RAG testing, demonstrations, and training. It is not a substitute for clinical judgment, hospital policy, or professional medical advice.
